DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 4-6, 9 and 10 in Paper No. 5 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 6 and 10 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In claim 6, "excepting the upper surface **not** formed with said ridge structure" is not enabling because the specification and figure (2) describe the metal silicide film (33) covering an upper surface of the gate electrode of the second field effect transistor excepting the upper surface formed with the ridge structure.

In claim 10, "wherein a width of said second film along a gate length direction is approximately equal to a width of said third film along the gate length direction" is not described in the specification or shown in the figures.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2814

5. Claims 9-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 9, line 8, "the underlying gate electrode" renders the claim indefinite. It is not clear that "the underlying gate electrode" is the gate electrode of the first field effect transistor or the second field effect transistor.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(e) the invention was described in—

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

7. Claims 4-5 are rejected under 35 U.S.C. 102(e) as being anticipated by

Matsushita [U.S. Pat. 6,413,810].

Matsushita (fig. 3, cols. 4-5) discloses a semiconductor device comprising:

a first field effect transistor (26) having a gate electrode formed on a first section (23a) of a semiconductor substrate;

a second field effect transistor (26) having a gate electrode formed on a second section (23b) of the semiconductor substrate; and

a ridge structure (27) made of insulating film material formed on an upper surface of the gate electrode of the second field effect transistor, the ridge structure extending along side edges of the gate electrode.

With respect to claim 5, Matsuhashi discloses a distance between two portion (two edges portion) of the ridge structure (27) extending along a direction crossing a gate length direction is approximately equal to a gate length of the first field effect transistor (see fig. 3C).
